

Product designer with a *technical* edge.

Valencia, Spain · Working remotely · hello@brenosampaio.com · brenosampaio.com · linkedin.com/in/brenosampayo

PROFILE

I came to design from inside the operation, not from the outside looking in. For years my job was the operation itself — service operations, hotel reception, shift work, the front and back office where things actually happen.

That's where I learned what software does to people under pressure: a good tool disappears and lets you do the work. Today I design as a product designer with an implementation sensibility — I think in systems, build and use design systems, and work AI-assisted through research and iteration while keeping the design judgment my own.

SELECTED WORK

Service Operations Dashboard

CONCEPT CASE · 2026 · SOLE DESIGNER

One operational view of what's open at shift handover, so information stops getting lost between tools, paper and memory. Designed for a tired shift, not a pretty demo.

TriageAI

CONCEPT CASE · 2026 · SOLE DESIGNER

Human-controlled AI intake for multilingual requests — AI structures and ranks, a human approves every reply that goes out. The honesty about when the AI is unsure is the design.

HOW I WORK

- ↳ Understand the work deeply — behaviours, constraints, where it breaks
- ↳ Anchor every decision in how the business actually runs
- ↳ Think in systems, not screens — IA, flows, states, rules first
- ↳ Design with clarity and restraint — clear, not clever
- ↳ Build with implementation in mind, through to handoff
