

BRENO SAMPAIO

Software Implementation & Application Support

Valencia, Spain | Open to hybrid and remote roles

hello@brenosampaio.com | brenosampaio.com | linkedin.com/in/brenosampaio

PROFILE

Technical-functional professional with first-hand service operations experience and a UX/UI background. I translate operational problems into implementable requirements, data fields, states, rules, acceptance criteria, onboarding and support documentation. Comfortable investigating issues across users, process and software, then communicating the next action clearly.

TARGET ROLES

- Software implementation and SaaS onboarding
- Application support and technical-functional consulting
- Service operations systems and multilingual workflows

SELECTED TECHNICAL-FUNCTIONAL CONCEPTS

Incident & Handover Workflow

Concept case - 2026

Defined incident fields, ownership, status transitions, permissions, escalation, handover history, validation, recovery and pilot acceptance criteria for a multilingual service-operations context.

Multilingual Support Triage

Concept case - 2026

Specified an intake contract for email, messaging and web forms across four languages, with routing rules, SLA and escalation logic, duplicate and invalid-payload handling, audit history and a human approval gate.

HOW I WORK

- Map the real workflow, actors, constraints and failure modes.
- Turn findings into requirements, fields, states, rules and acceptance criteria.
- Validate happy paths, edge cases, permissions and recovery behaviour.
- Prepare pilot, UAT, onboarding, handover and support documentation.
- Use AI assistance selectively; verify outputs and retain responsibility for decisions.

LANGUAGES

Portuguese

Native

Spanish

Fluent

French

Professional / fluent

English

Professional working

TECHNICAL FOUNDATION

- SQL and relational data
- REST APIs, HTTP and JSON
- Postman and troubleshooting evidence
- Git and release-aware collaboration
- Jira, Excel, Figma and Notion

CORE STRENGTHS

- Operational discovery
- Functional requirements
- Data and workflow modelling
- UAT and acceptance criteria
- Onboarding and documentation
- Issue investigation
- Cross-language communication
